

Requirement	Description	Work Estimate w/u	Priority				
Pre-process text for decoding	The websocket service must support the pre-process text request that should take text, turn it into lower case, then tokenize and split into one sentence per line format. The resulting text is to be sent back to the client. The text language must be indicated with the request.	80	M			MoSCoW model	
Post-process text after decoding	The websocket service must support the pre-process text request that should take text and restore it into the original format, i.e. untokenized and capitalized etc. The resulting text is to be sent back to the client. The text language must be indicated with the request.	80	M			M - Must	First pririty, that is absolutely necessary to deliver
						S - Should	Second priority, that is to be delivered, but can be omitted in case of lack of time
						C - Could	Third priority, that is desired to be delivered, in case there is time left for it
						W - Would	Fourth priority, that is desired but is definitely not for the delivery
